Phil

There is no need to review or comment on the addendums on the FSP and QAPP. EPA and the contractor met and discussed how the original FSP and QAPP could be revised to be phased due to resource constraints. We reviewed and discussed the information developed by the PRP in the Phase I RI and decided to not sample for pesticides, herbicides and pcbs. We also decided to obtain background sample data to compare with the existing data before doing additional soil sampling in AOC 1. Also can you please send me Mr. Smith's contact info.

The contractor is scheduled to start installing monitor wells on Sep 9. They have not determined if they are going to work over the weekend of Sep 14-15, if they do they expect to be finished with installing wells and soil sampling by Sep 18. They will sample/develop the monitor wells the week of Sep 23. I plan to be onsite the week of Sep 9-13 and Sep 23-27. I would be happy to have you there if your schedule and funding allow.

Thanks

Brian;

I received a copy of the FSP and QAPP Addendums, and was wondering what your review time is for comments to these documents. Also, if the NRDA trustees are involved, please add Mike Smith to your mailing list.

Sincerely;
